How Adults Can Work Together Presentation

Communities that Undermine Learning

Conversations in Schools that Improve Student Achievement

Purpose

A focus on effective adult collaboration moves teams toward becoming accountable communities that are able to address issues with a problem-solving approach rather than trying to ignore or minimize them. Accountable communities also self-monitor group and individual functioning and share both urgency and hope (The Skillful Leader by Platt and Tripp, 2000).

How & When to Use

Tool Set A supports Team Leads and members to acquire the necessary background knowledge to become an accountable and professional learning community focused on student achievement and results. Along with a professional reading, and/or the presentation in this Tool Set, your Success Team can assess the ingredients for effective adult collaboration and conversation.
The Freshman Success Framework is the foundation for effective school practice on On-Track and student success. The Network for College Success has seen the greatest and most sustainable gains for freshmen when schools develop high-functioning educator professional learning communities, which we call Success Teams.

This Tool Set focuses on the below actions of a Success Team stemming from the Freshman Success Framework.

<table>
<thead>
<tr>
<th>Elements</th>
<th>Success Team</th>
</tr>
</thead>
</table>
| Setting Conditions | • Develops effective meeting strategies, such as establishing a mission statement and clear purpose, and building norms and action-oriented agendas  
• Shares Success Team roles and responsibilities conducive to success work  
• With principal and Team Lead, establishes foundational knowledge, sets purpose, and creates freshman success goals for On-Track and student connection |

This Tool Set also highlights the actions stemming from the Framework for the Principal and Team Lead in support of the Success Team work.

Team Lead

• Setting Conditions: Acquires foundational knowledge on the importance of freshman course performance as well as tools and strategies to lead the Success Team  
• Implementation: Establishes team meeting conditions conducive to the successful execution of Success Team duties

Principal

• Setting Conditions: Selects, programs, sets purpose, and provides foundational knowledge on freshman success work for core set of grade-level teachers  
• Setting Conditions: Identifies team leadership (Team Lead, data technician, social-emotional learning specialist, etc.) and communicates expectations for their engagement with Success Team  
• Implementation: Provides professional development and training opportunities on the transition to high school, data strategy, and social-emotional learning
How Adults Can Work Together Presentation

A sample presentation to share with Success Team members focused on working together to improve On-Track rates.
How Adults Can Work Together Presentation

Created by the NCS Freshman Success Collaborative
November 2009

Adult Attitudes

- Be present
- Be committed
- Be responsible
Facilitating Effective Adult Collaboration and Conversation

System of Communication

● How can we set up a system of communication that will foster the collaboration necessary to meet student needs in a timely manner?
● How do we communicate with students to nurture ownership of their progress?

Make Data Our Friend

● Make the time to analyze data
● Collaboratively develop action plans
● Monitor progress on action plans
● Evaluate action plans with data-based evidence
Solutions-Based Orientation

- Bulk of conversations are focused on strategies for improvement
- Creating a culture of support for struggling teachers

Setting Students Up for Success

- Universal expectations for all ninth grade classes
- Student-friendly objectives
- Relevance to students’ lives/work
- Keep up with grading
- Provide timely and frequent feedback to students on their progress
- Provide multiple opportunities to succeed
- Common assessments
More on Common Assessments

- Developed collaboratively
- Aligned to standards
- Fine tuned to assess what students are expected to know/be able to do
- Have length appropriate for the time allotted for testing
- Have an agreed-upon rubric
Communities that Undermine Learning

An article that describes how three community prototypes – Toxic, Lassiez-Faire, and Congenial – serve as obstacles to team functioning and, as a result, limit improvement efforts.
Period 2 common planning time at River High School: Five minutes after the last bell, Team 9B teachers are amiably catching up on one another’s weekends while waiting for the perpetual stragglers to arrive.

Maria, the team leader, seems to be the only one with a sense of urgency. “People, remember our norm of getting started promptly,” she implores. “Let’s go. We need to spend a few minutes planning April’s field trip. Then we have to talk about how we’re doing with the interdisciplinary writing prompts.”

Before Maria has finished distributing a short agenda, Principal Knox arrives. He’s on his daily walkthrough this period and cannot stay, but he wants to encourage the group with a “little pat on the back.”

Al Knox is proud of his Professional Learning Community initiative at River High School. He has provided his PLCs with common meeting time, stipends for team leader(s), and summer training in norm development and agenda setting. Compared to the fractious group of ninth-grade teachers he saw two years ago, 9B is collaborating pretty well, Al thinks. He is pleased by the congenial tone of the gathering and the team’s shared goal to improve student writing — a school priority. After a quick thanks for their efforts, Al continues his walk and leaves 9B to get on with its business.

If Al had stayed longer, the unfolding interaction might have made him reconsider his assessment. Instead of a few minutes, the field trip discussion took more than half the meeting. A tangent into a student discipline issue chewed up another 15 minutes.

Team 9B got to the main agenda item with 10 minutes left. At that point, two teachers admitted that they were not getting to the writing prompts despite previous promises. John “never could find the time” and Tina complained about “doing English in science.” Colleagues’ comments were disarmingly solicitous:

“That’s OK, John. Get to it when you can.”

“Listen, your low group isn’t going to be able to write much anyway. Maybe you could just experiment with one of your good sections.”

No one expressed dismay over how time had been used or the failure to address the...
one agenda item that would have a direct impact on student performance. No one made a passionate plea about the serious gap in writing achievement. No one took a colleague to task for violating the team agreement, thereby granting tacit permission to the notion that individual autonomy takes precedence over responsibility to the group. If we measure collaboration in terms of impact on teaching and learning, the meeting was a failure, and the group’s performance inadequate.

**False hope**

Team 9B is one of many learning communities with the worthwhile mission of improving student learning springing up all over California. Some do indeed fulfill the promise of professional learning set forth by DuFour and others. But as Michael Fullan warns us from his research, “[We] have found that professional learning communities are being implemented superficially. They give the educators involved a false hope of progress.”

To fulfill the promise of professional learning communities, skillful leaders need to do more than simply marshal resources and cheer faculty on from the sidelines. We must distinguish between groups that genuinely pool their mental effort to develop organizational intelligence in the service of greater student learning — what we call Accountable Communities — and groups whose interactions block improvement and protect mediocre performance by both students and adults.

Three different prototypes fall into the latter category: the Toxic Community, the Laissez-Faire Community and the Congenial Community. Although they may look different, each group:

- accepts or tolerates low performance, inertia or lack of contribution from its own members;
- expects and accepts low performance from groups of students who have somehow been labeled as less worthy or less capable;
- attributes poor student achievement to external factors like family background, lack of financial support for schools or community conditions;
- derives benefit from, and therefore experts effort to sustain, conditions that favor adult comfort or convenience over student needs;
- has little or no collective experience with, or models for, effective problem-solving skills and strategies.

Real schools are full of such underperforming groups, many of which parade in writing achievement. No one took a colleague to task for violating the team agreement, thereby granting tacit permission to the notion that individual autonomy takes precedence over responsibility to the group. If we measure collaboration in terms of impact on teaching and learning, the meeting was a failure, and the group’s performance inadequate.

to the current situation before asking for changes.

- Give feedback to individuals when expectations for effective collaboration are not met, but avoid attacking or labeling statements. Instead, focus on the importance of pooling knowledge to better help students and name the consequences for students when adults are unable to collaborate.

- Adopt and consistently use structures that equalize participation in discussion and minimize opportunities for haranguing and bullying.

- Use transparent, data-based processes for identifying student learning problems and setting priorities for action, rather than unstructured decisions by acclaim or assertion.

- Honor contract provisions consistently, but persist with clear non-negotiables and expectations. Do not let grievances distract from your focus.

- Remove the most negative individual or a destructive ringleader from the group.

The Laissez-Faire Community

While Toxic Communities are often bonded by their sense of injury or by a common vision of “the other” as enemy, groups we have designated Laissez-Faire share little beyond a desire or belief in their right to be left alone to “do their own thing.”

In Laissez-Faire Communities, teachers or administrators co-exist pleasantly but are disconnected from institutional goals and from each other’s work and work concerns. Members are largely motivated by personal needs either for comfort and convenience or for instructional autonomy; no shared purpose or vision drives their interaction.

If Toxic Communities snarl and snort in response to requests for collaborative problem solving, Laissez-Faire Communities sniff and sigh with martyred resignation. The school’s designated goals do not appear to have immediate relevance or utility. Rather than adversarial, as in Toxic Communities, relationships with leaders are often collusive: “You scratch my back, I’ll scratch yours.”

Laissez-Faire Communities frequently evolve in heavily decentralized districts or schools in the absence of strong leadership. They also develop when leadership defines its role as protection of cooperative members and motivation through favors and deals. These communities tend to support mediocre learning because they see it as an inevitable result of student limitations and because examining and subsequently changing one’s core practice would violate the fundamental value of autonomy.

Approaches for intervening with Laissez-Faire Communities

- Identify the practices and forces that are supporting autonomous actions, deal-making, secrecy or low expectations.

- Determine when and how the group interacts well to solve a problem (even if it is low-level) and build on established structures or norms.

- Establish clear problem-solving structures and make problem solving a central part of meeting agendas. Use time efficiently.

- Assess how much time is wasted on unimportant topics; be judicious in identifying the most important problems for the focus of collaborative action.

- Monitor how time is spent during group meetings; collect agendas and minutes.

- Help teams use standards and feedback to define a common learning problem, identify a change goal for itself, and establish how it will monitor its own performance.

- Offer options for initial structuring of joint work. Looking at student work, developing common assessments and examining student test results could all be productive starting points.

- Have much of the work done in course-alike pairs or trios where there is compelling rationale for working together.

The Congenial Community

Congenial Communities are “happy” or “nurturing” places to work. These groups send off the false aura of smoothly func-
tioning teams. Considerable effort goes into building and maintaining adult relationships and comfort, but unlike Toxic or Laissez-Faire Communities, they have no difficulty with requests to collaborate.

Members usually enjoy one another’s company and have positive or neutral relationships with the leaders. Mediocrity is sustained because members do not challenge one another’s ideas and practices in service of better student learning, because getting along comes first.

Problems are quickly reduced to simplistic statements and solutions, and no real effort is made to examine data to get at the core practices that are no longer serving children’s needs. Congenial Communities especially can be by-products of leader shortcomings.

Recognizing that good relationships and trust create effective teams, administrators often overemphasize the role of congeniality and inadvertently send signals that getting along is paramount. Such leaders see themselves as being responsible for keeping peace and harmony, and worry that any attempt to press for genuine changes in practice will “undermine school morale” without producing results.

Thus, everyone understands that naming an ineffective practice goes against established cultural norms, and difficult questions about poor student or adult performance are swept under the rug.

Approaches for intervening with Congenial Communities

- Lead with relationship building and the need for acceptance and affiliation, but use data to reframe focus from adult comfort to students’ losing out.
- Help congenial groups be more accepting of conflict by adopting protocols that assist members in managing conflict (see National School Reform Faculty Web site, www.nsfharmony.org).
- Invest in training that helps members to identify their own preferential styles and conflict-aversive behavior, and analyze the consequence of “burying” difficult information or important disagreements.
- Invite community members to examine their own performance against criteria for a

Books Worth Reading

Six Secrets of Change; How Leaders Learn

Reviewed by George Manthey, assistant executive director, ACSA Educational Services

“Give me a good theory over a strategic plan any day of the week,” is the opening sentence of Michael Fullan’s latest book. It is a guide for both business and education leaders who want to make their organizations “survive and thrive.” Six “secrets” are offered as a theory of action, with the caution that leaders be open to “surprises or new data that direct further action.”

The secrets are not likely to surprise you as they deal with the way leaders treat employees, define purpose, build capacity, learn, share information, and create organizations that learn. Fullan cautions that for the secrets to work they must all be nurtured, as none are sufficient in isolation of the others. For me, the six secrets provide a useful filter for examining the efficacy of decisions and actions.

Gordon Donaldson credits Joanne Iskin, a principal in California’s Lennox Unified School District, for insisting that this book get written. In it Donaldson provides a model (Interpersonal-Cognitive-Intrapersonal or I-C-I) that he has found useful for understanding performance and learning. The book provides real examples of how teacher leaders and principals have used the I-C-I model to provide a framework for their own leadership of learning. Donaldson asserts, “Persistent hurdles to leader effectiveness are the result, in part, of gaps of leaders’ interpersonal, intrapersonal, and cognitive knowledge sets.”

One aim of the book is to help leaders understand that their focus can not be their own skill set, but must include increasing their understanding of how what they do affects the “knowledge, attitudes, beliefs, and practice” of those they are leading. Donaldson also reminds us that the highest purpose of leadership of schools is to lead in ways that increase student learning.

“How Leaders Learn” (2008), by Gordon A. Donaldson. Published by Teachers College Press.
collaborative and accountable community and identify goals for growth.

Team 9B is certainly not a Toxic group. It is probably more a hybrid. It has qualities that mark it as Laissez-Faire: spending time on topics not focused on teaching and learning and embracing individual autonomy as a primary value. The aversion to conflict and the cultural norm of guarding the friendly climate marks it more as a Congenial team.

The exact classification, however, is less important for leaders than being clear about how to monitor, supervise and coach Team 9B to work in ways that are more likely to impact student learning. This requires that leaders recognize malfunctioning teams and adopt a toolkit of intervention strategies listed above. They also need a clear vision of what a high-performing team looks like.

The Accountable Community: The vision of excellence

Accountable Communities are the much desired but rarely achieved ideal for team functioning. They are demanding and sometimes uncomfortable places to work. Labeling a community as “accountable” means its members have moved beyond merely working together well in service of students in general. The team takes direct responsibility for monitoring its own actions and for calling others on behaviors and stances that are not helpful to the mission.

Accountable Communities impact the consistency and quality of members’ classroom instruction more than teams functioning at other levels. Accountable Communities live a “no quarter, no excuses” existence, where every choice a teacher makes is open to examination and revision when there are students who have not yet learned what they need to learn.

Could you describe any of your teams as accountable? Do you have some good teams who could stretch to this level of performance?

These communities are bonded and motivated by the glue of common goals, common agreements, common assessment and/or common students. They do not depend on external authorities to police them; they are able to connect their classroom work to larger organizational goals.

Accountable Communities are the much desired but rarely achieved ideal for team functioning. They are demanding and sometimes uncomfortable places to work.

Because of the emphasis on problem solving and the constant fine-tuning that goes on in Accountable Communities, the impact of their teaching on student learning is less random. Through their skilled problem solving, they relentlessly address learning gaps (concepts not yet understood and skills not yet mastered) for both adults and students.

There is a willingness to move beyond the most obvious solutions and responses to problems and seek other explanations and opportunities. They let go of treasured but non-working approaches when faced with data indicating their lack of success. When the knowledge of the group falls short, they seek external expertise.

Accountable Communities do not collaborate on everything. They are very selective and are known to push back against principals who have gone overboard on collaboration. Ironically, these groups are marked as much by what they don’t collaborate about! Some have described this as “relentless focus” on matters of instruction and learning (see box above).

If school leaders want to maximize the power of PLCs, they need to not just support, but monitor and coach. Otherwise, we will have a few great teams, fewer great schools and many students performing below our hopes.

Conversations in Schools that Improve Student Achievement

A quick guide that provides criteria and specific language for collegial conversations focused on student outcomes.
Conversations in Schools that Improve Student Achievement

Schools that make the most learning gains for students have leaders who ensure the frequency and quality of professional conversations. Conversations among adults about teaching and learning permeate the building. That means they happen at all times of day, in formal and informal settings, and all the adults involve themselves.

The conversations:

- are substantive
- use recent information about student performance
- spring from questions that assume responsibility and capacity to improve student learning
- are non-defensive
- enable people to know things about each other as people
- reach out to Professional Knowledge
- lead to action

Listen in as you walk around the building....meetings, teachers' lounge, hallways. If you hear conversations like this, you can be sure the school is improving student results.

“Substantive” means they are talking concretely about teaching and learning itself, and the issues, decisions and actions teachers are taking in daily practice with specific students.

“Based on recent information” means teachers bring specific and timely evidence about how students are doing to the table. It could be from yesterday’s work as well as quarterly assessments, writing samples, test scores: whatever will illuminate where students are and what they need next.

“Spring from questions” means the conversations are asking questions about the connection between teacher action and student results with an assumption that it is our job to improve student results, and that we are able to do so.

“Non-defensive” means that when students don’t learn, teachers face the evidence squarely and accept responsibility for their part. They don’t get hung-up in guilt or blame of themselves or of the students. Thus they are always working on how to adjust their actions to improve student results.

“Each other as people” means that staff members come to know one another as individuals who have life histories and interests and commitments.

“Reaching out to Professional Knowledge” means that these conversations do not happen in a vacuum. The teachers are aware that there is a vast reservoir of Professional Knowledge created by peers over the past century; and they need to bring this Professional Knowledge into their planning and their problem solving in order to maximize student success.

“Lead to action” means the conversations go beyond being interesting and satisfying for the participants. They lead to changes in instruction that benefit students. These changes can be seen, heard, and measured in their positive results.
